ELEKTROHYDRAULIC ACTUATORS OF THE SERIES EP

ELEKTROHYDRAULIC ACTUATORS OF THE SERIES EP

Devices EP are designated for a control of industrial appliances, where is demanded activity of a mechanical pulling force connected with a linear movement (jaw brakes, latches, containers, valves).

Outer parts incl. terminal box are made from an Alu-alloy.

The drive unit is created by a built-in three phases induction motor driving a blade-wheel of hydraulic pump.

The return movement of the device after switching-off the network is guaranteed thanks to gravity of the controlled appliances or with help of built-in return springs. Speed of the draught pole can be controlled in a small range either by means of an adjusting screw positioned under the filling opening in the upper part of the cover (retardation in c.w. direction) or for a fluent retardation with help of valves (Z – movement up, K – down, S – both directions).

GENERALLY:

- Working position vertical or with some 60° declination from vertical; horizontal on request
- Voltage 380 or 500 V/50 Hz, on request 220 to 575 V, 50 or 60 Hz
- Duty cycle continuous S1 or interrupted S2, S3 (till 2000 switches per hour)
- Protection IP 54, cooling IC 410

Performance:

- N23 normal for ambient temperatures -25 to +40 °C
- T23 tropical -25 to +45 °C
- F23 cold -40 to +40 °C

DECLARATION FOR AN ORDER:

EP xxx/ xxx Pxx T ZKS (example: EP 20/50 P20 Z)

The diagram shows the breakdown of the model number EP xxx/ xxx Pxx T ZKS:

- xxx/ xxx: valve
- Pxx: damping spring
- T: return force x (10 N)
- ZKS:
 - Z – direction up
 - K – direction down
 - S – both directions

TECHNICAL DATA
